DIGRAIN

Digrain Fumite OPP Disinfectant Smoke Bomb

Digrain Fumite OPP offers a disinfectant solution which provides a broad spectrum of antimicrobial activity, scientifically proven to kill 99.9% of well-known bacteria, viruses, and fungi such as Influenza and Norovirus.

Commonly known as 2-phenylphenol (or OPP), the active biocide is a weakly acidic, phenolic organic compound which acts specifically on the cell membrane.

OPP (EC no. 201-993-5) is a general disinfectant commonly used in households, hospitals, offices, and other premises and has been tested in accordance with EU Guidance and approved according to EC Regulation 1107/2009.

As a disinfectant smoke, Fumite OPP offers professionals a solution to disinfect areas with lower quantities of biocide than if spraying, reaching inaccessible areas for a thorough deep clean treatment, without requiring subsequent rinsing. Digrain Fumite OPP is a dry disinfectant posing no corrosion risk. The easy-to-use, pre-dosed tin provides a uniform dispersion upon lighting. As the disinfectant smoke disperses the active ingredient comes into contact with all surfaces in the room and treats both surfaces and air.

HOW TO USE

Before:

1. Apply treatment in pre-cleaned areas
2. Switch off smoke alarm devices
3. Clear people, plants, animals including fish, flammable goods and packaged food from the area to be treated
4. Seal area to be treated as effectively as possible. Close all doors and windows.

In use:

5. Take the required number of smoke generators and shake lightly to loosen powder
6. Tear off can lid and remove
7. Place each smoke generator on a fireproof base such as a ceramic plate. When a number of smoke bombs are being used, space them throughout the area to be treated and prepare all for ignition before lighting the first.
8. Light smoke generators via the igniter using a match in sequence starting with the furthest from an identified exit
9. Leave for at least four hours or two hours per 1.5m ceiling height.

After:

10. Open windows and doors and ventilate for 30-60 minutes before entering the premises.

TREATMENT RATE:

Dose: 300mg
